

INFORMATION FOR WOMEN UNDERGOING ABDOMINAL MESH SURGERY TO TREAT PROLAPSE

The Department of Health has recently suspended the use of all tapes to treat urinary incontinence and mesh inserted vaginally to treat prolapse. There are new requirements to confirm appropriate information has been supplied to patients and that the outcome of the surgery we have decided upon is audited.

We have discussed both non-surgical and surgical options and you have elected to have the surgical option as outlined in your clinic letter.

It is now a requirement that prior to the planned operation to treat your prolapse the following must have occurred:

- I am required to inform you that these are procedures are subject to high vigilance scrutiny
- You must confirm in writing that you have read the 3 leaflets attached (see below). After having read these please sign this letter below which confirms that you have read them and understood their content and that you have asked any questions that you have regards the information contained.
- Your treatment plan must have be discussed by another urogynaecologist or urologist. Your case will be discussed at The Portland MDT with one of my colleagues.

Leaflets attached:

- Laparoscopic mesh sacrohysteropexy (University College Hospital leaflet)
- General mesh (University College Hospital leaflet)
- Sacrohysteropexy for uterine prolapse (womb prolapse) (British Society of Urogynaecology leaflet)

I confirm I have read and understood the contents of this letter including the attached documents. I understand that I need to bring in the fully completed questionnaire on the day of surgery in order for my operation to proceed.
